

# CliQ DIN Rail Power Supply

## 24V 48W 1 Phase / DRP-24V48W1AZ

### Highlights & Features

- Universal AC input voltage range
- Power will not de-rate for the entire input voltage range
- Rugged and compact design (Vibration 5 G, Shock 30 G)
- Conforms to harmonics current IEC/EN 61000-3-2, Class A
- Wide operating temperature range -20°C to 70°C
- Overvoltage / Overcurrent / Over Temperature / Short Circuit Protections
- Certified according to IEC/EN/UL 62368-1

### Safety Standards

CB Certified for worldwide use

<b>Model Number:</b>	DRP-24V48W1AZ
<b>Unit Weight:</b>	0.22 kg (0.49 lb)
<b>Dimensions (L x W x D):</b>	100 x 32 x 100.6 mm (3.94 x 1.26 x 3.96 inch)

### General Description

The DRP-24V48W1AZ has a power rating of 48W with 24V output voltage. Its rugged plastic casing has a compact body at only 32 mm wide and operates within a wide temperature range from -20°C to 70°C. Like its CliQ predecessors, the DRP-24V48W1AZ comes with universal AC input and complies with major industrial standards like UL 508 (Safety for Industrial Control Equipment), EMI according to EN 55011 (Industrial, scientific and medical (ISM) radio-frequency equipment) and EMS according to EN 61000-6-2 (Immunity for industrial environments). For broader application compatibility, the product is also certified for ITE (Information Technology Equipment) standard according to IEC/EN/UL 60950-1 and IEC/EN/UL 62368-1 Audio/video, Information and Communication Technology Equipment.

### Model Information

CliQ DIN Rail Power Supply

Model Number	Input Voltage Range	Rated Output Voltage	Rated Output Current
DRP-24V48W1AZ	85-264 Vac (120-375 Vdc)	24 Vdc	2.00 A

### Model Numbering

DR	P –	24V	48W	1	A	Z
DIN Rail	Power Supply	Output Voltage	Output Power	Single Phase	CliQ Series	Plastic Case

# CliQ DIN Rail Power Supply

## 24V 48W 1 Phase / DRP-24V48W1AZ

### Specifications

#### Input Ratings / Characteristics

Nominal Input Voltage	100-240 Vac
Input Voltage Range	85-264 Vac
Nominal Input Frequency	50-60 Hz
Input Frequency Range	47-63 Hz
Nominal DC Input Voltage	125-250 Vdc
DC Input Voltage Range*	120-375 Vdc
Input Current	< 1.40 A @ 115 Vac, < 0.70 A @ 230 Vac
Efficiency at 100% Load	> 87.0% @ 115 Vac & 230 Vac
Max Power Dissipation	0% load < 0.3 W @ 115 Vac & < 0.5 W @ 230 Vac
	100% load < 7.0 W @ 115 Vac & 230 Vac
Max Inrush Current (Cold Start)	< 28 A @ 115 Vac, < 56 A @ 230 Vac
Leakage Current	< 1 mA @ 240 Vac

\*Fulfills tested conditions

#### Output Ratings / Characteristics\*\*

Nominal Output Voltage	24 Vdc
Factory Set Point Tolerance	24 Vdc $\pm$ 1%
Output Voltage Adjustment Range	22-26 Vdc
Output Current	2.00 A (48 W max.)
Output Power	48 W
Line Regulation	< 1.0% (@ 85-264 Vac input, 100% load)
Load Regulation	< 1.0% (@ 85-264 Vac input, 0-100% load)
PARD*** (20 MHz)	< 480 mVpp
Rise Time	< 50 ms @ nominal input (100% load)
Start-up Time	< 3,000 ms @ nominal input (100% load)
Hold-up Time	> 10 ms @ 115 Vac,
	> 60 ms @ 230 Vac (100% load)
Dynamic Response (Overshoot & Undershoot O/P Voltage)	$\pm$ 5% @ 85-264 Vac input, 10-100% load (Slew Rate: 0.1 A/ $\mu$ s, 50% duty cycle @ 5 Hz to 1 KHz)
Start-up with Capacitive Loads	1,000 $\mu$ F Max

\*\*For power de-rating from 50°C to 70°C, see power de-rating on page 3.

\*\*\*PARD is measured with an AC coupling mode, 5 cm wires, and in parallel with 0.1  $\mu$ F ceramic capacitor.

# CliQ DIN Rail Power Supply

## 24V 48W 1 Phase / DRP-24V48W1AZ

### Mechanical

Case Cover / Chassis	Plastic	
Dimensions (L x W x D)	100 x 32 x 100.6 mm (3.94 x 1.26 x 3.96 inch)	
Unit Weight	0.22 kg (0.49 lb)	
Indicator	Green LED	DC OK
Cooling System	Convection	
Terminal	Input / Output	5 Pins (Rated 300 V/15 A)
Wire	AWG 20-14	
Mounting Rail	Standard TS35 DIN Rail in accordance with EN 60715	
Noise (1 Meter from power supply)	Sound Pressure Level (SPL) < 25 dBA	

### Environment

Surrounding Air Temperature	Operating	-20°C to +70°C
	Storage	-25°C to +85°C
Power De-rating	Vertical Mounting	-20°C to -10°C de-rate power by 1% / °C, -10°C to 0°C de-rate power by 2% / °C,
	Horizontal Mounting	> 50°C de-rate power by 2.5% / °C
Operating Humidity	5 to 95% RH (Non-Condensing)	
Operating Altitude	0 to 2,000 Meters (6,560 ft)	
Shock Test	Non-Operating	IEC 60068-2-27, 30 G (300 m/S <sup>2</sup> for a duration of 18 ms, 1 times per direction, 2 times in total)
Vibration	Non-Operating	IEC 60068-2-6, 10 Hz to 150 Hz @ 50 m/S <sup>2</sup> (5 G peak); 90 min per axis for all X, Y, Z direction
Bump Test	Operating	IEC 60068-2-29, Half Sine Wave: 10 G for a duration of 11 ms, 1,000 times per direction, 6,000 times in total
Over Voltage Category	III	According to IEC/EN 62477-1 / EN 60204-1 (clearance and creepage distances)
Pollution Degree	2	

### Protections

Overvoltage	< 32.4 V, SELV Output, Latch Mode
Overload / Overcurrent	> 105~180% of rated load current, Hiccup Mode, Non-Latching (Auto-Recovery)
Over Temperature	< 75°C Surrounding Air Temperature @ 100% load, Latch Mode
Short Circuit	Hiccup Mode, Non-Latching (Auto-Recovery when the fault is removed)
Internal Fuse at L pin	T3.15AH
Protection Against Shock	Class I with PE* connection

\*PE: Primary Earth

### Reliability Data

MTBF	> 500,000 hrs. as per Telcordia SR-332 I/P: 115 Vac, O/P: 100% load, Ta: 25°C
Expected Cap Life Time	10 years (115 Vac & 230 Vac, 50% load @ 40°C)

### Engineering Data

#### Output Load De-rating VS Surrounding Air Temperature

**Fig. 1 De-rating for Vertical and Horizontal Mounting Orientation**

-20°C to -10°C de-rate power by 1% / °C,  
 -10°C to 0°C de-rate power by 2% / °C,  
 > 50°C de-rate power by 2.5% / °C

#### Note

1. Power supply components may degrade, or be damaged, when the power supply is continuously used outside the shaded region, refer to the graph shown in Fig. 1.
2. If the output capacity is not reduced when the surrounding air temperature exceeds its specification as defined on Page 3 under "Environment", the device may run into Over Temperature Protection. When activated, the output voltage will go into latch-off mode until the component temperature cools down and the AC power is recycled.
3. In order for the device to function in the manner intended, it is also necessary to keep a safety distance as recommended in the safety instructions while the device is in operation.
4. Depending on the surrounding air temperature and output load delivered by the power supply, the device can be very hot!
5. If the device has to be mounted in any other orientation, please contact [info@deltapsu.com](mailto:info@deltapsu.com) for more details.

# CliQ DIN Rail Power Supply

## 24V 48W 1 Phase / DRP-24V48W1AZ

### Output Load De-rating VS Input Voltage

- No output power de-rating across the entire input voltage range

### Assembly & Installation

The power supply unit (PSU) can be mounted on 35 mm DIN rails in accordance with EN60715. For Vertical Mounting, the device should be installed with input terminal block at the bottom. For Horizontal Mounting, the device should be installed with input terminal block on the left side.

Each device is delivered ready to install.

#### Mounting

- Snap on the DIN rail as shown on the left:
1. Pull the unit's DIN rail latch OUT.
  2. Tilt the unit slightly upwards, hook the top end onto the DIN rail and push downwards until stopped.
  3. Position the bottom front end against the DIN rail.
  4. Push the unit's latch DIN rail IN to lock.

#### Dismounting

- To uninstall:
1. Pull the unit's DIN rail latch OUT.
  2. Tilt the bottom part of the unit out.
  3. Push the unit up and pull out from the DIN rail.

In accordance to EN 60950 / UL 60950 and EN 62368 / UL 62368, flexible cables require ferrules. Use appropriate copper cables designed to sustain operating temperature of at least 75°C or more to fulfill UL requirements.

For stranded wires it is recommended to use suitable lug to crimp wires.

## 24V 48W 1 Phase / DRP-24V48W1AZ

### Safety Instructions

#### ■ Vertical Mounting

#### ■ Horizontal Mounting

- ALWAYS switch mains of input power OFF before connecting and disconnecting the input voltage to the unit. If mains are not turned OFF, there is risk of explosion / severe damage.
- **To guarantee sufficient convection cooling, please refer to the following instructions to ensure sufficient clearance around the device.**
- **Vertical Mounting:** 50 mm (1.97 inch) above and below the device as well as a lateral distance of 20 mm (0.79 inch) to other units.
- **Horizontal Mounting:** 50 mm (1.97 inch) above and below the device as well as a lateral distance of 50 mm (1.97 inch) to other units.
- Note that the enclosure of the device can become very hot depending on the surrounding air temperature and load of the power supply. Risk of burns!
- The main power must be turned off before connecting or disconnecting wires to the terminals!
- DO NOT insert any objects into the unit.
- Hazardous voltages may be present for up to 5 minutes after the input mains voltage is disconnected. Do not touch the unit during this time.
- The power supplies unit should be installed in minimum IP54 rated enclosure.
- The power supplies are built in units and must be installed in a cabinet or room (condensation free environment and indoor location) that is relatively free of conductive contaminants.

# CliQ DIN Rail Power Supply

## 24V 48W 1 Phase / DRP-24V48W1AZ

### Functions

- Graph illustrating the Start-up Time, Rise Time, and Hold-up Time

### Start-up Time

The time required for the output voltage to reach 90% of its final steady state set value, after the input voltage is applied.

### Rise Time

The time required for the output voltage to change from 10% to 90% of its final steady state set value.

### Hold-up Time

Time between the collapse of the AC input voltage, and the output falling to 95% of its steady state set value.

### Inrush Current

Inrush current is the peak, instantaneous, input current measured and, occurs when the input voltage is first applied. For AC input voltages, the maximum peak value of inrush current will occur during the first half cycle of the applied AC voltage. This peak value decreases exponentially during subsequent cycles of AC voltage.

### Dynamic Response

The power supply output voltage will remain within  $\pm 5\%$  of its steady state value, when subjected to a dynamic load from 10% to 100% of its rated current.

- 50% duty cycle / 5 Hz to 1 KHz

# CliQ DIN Rail Power Supply

## 24V 48W 1 Phase / DRP-24V48W1AZ

### Overload & Overcurrent Protections (Auto-Recovery)

The power supply's Overload (OLP) and Overcurrent (OCP) Protections will be activated when output current exceeds 105~180% of  $I_O$  (Max load). In such occurrence, the  $V_O$  will start to droop and once the power supply has reached its maximum power limit, the protection is activated and the power supply will go into "Hiccup mode" (Auto-Recovery). The power supply will recover once the fault condition of the OLP and OCP is removed and  $I_O$  is back within the specifications.

Additionally, if the  $I_O$  is  $<105-180\%$  but  $>100\%$  for a prolonged period of time (depending on the load), the Over Temperature Protection (OTP) will be activated due to high temperature on critical components. The power supply will then go into "Latch mode" until the PSU cools down and the AC power is recycled.

### Short Circuit Protection (Auto-Recovery)

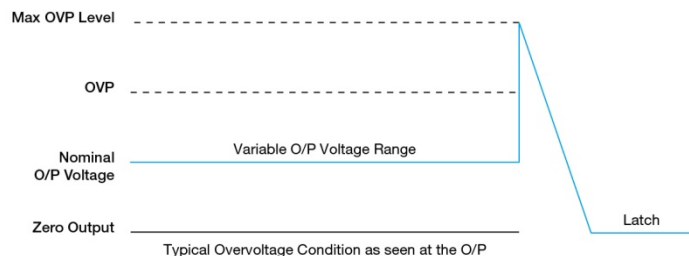

The power supply's output OLP/OCP function also provides protection against short circuits. When a short circuit is applied, the output current will operate in "Hiccup mode", as shown in the illustration in the OLP/OCP section on this page. The power supply will return to normal operation after the short circuit is removed.

### External Input Protection Device

The unit is protected at the L pin, with an internal fuse that cannot be replaced. The power supply has been tested and approved on 20 A (UL) and 16 A (IEC) branch circuits without additional protection device. An external protection device is only required if the supplying branch has an ampacity greater than above. Thus, if an external protective device is necessary, or, utilized, please refer a minimum value of 10 A B- or 6 A C- characteristic breaker.

### Overvoltage Protection (Auto-Recovery)

The power supply's overvoltage circuit will be activated when its internal feedback circuit fails. The output voltage shall not exceed its specifications defined on Page 3 under "Protections".

### Over Temperature Protection (Auto-Recovery)

As mentioned, the power supply also has Over Temperature Protection (OTP). This is activated when the overload condition persists for an extended duration and the output current is below the overload trigger point but  $>100\%$  load. In the event of a higher operating condition at 100% load, the power supply will run into OTP when the surrounding air temperature is  $>75^{\circ}\text{C}$ . When activated, the output voltage will go into latch-off mode until the component temperature cools down and the AC power is recycled.

# CliQ DIN Rail Power Supply

## 24V 48W 1 Phase / DRP-24V48W1AZ

### Operating Mode

#### ■ Redundant Operation

In order to ensure proper redundant operation for the power supply unit (PSU), the output voltage difference between the two units must be kept at 0.45~0.50 V for 24 V supplies. Follow simple steps given below to set them up for the redundant operation:

##### Step 1.

Measure output voltage of PSU 1 and PSU 2. If PSU 1 is the master unit, then  $V_O$  of PSU 1 must be higher than PSU 2. In order to set the output voltage, individually connect the power supply to 50% of rated load at any line voltage from 85-264 Vac, and set the PSU 1 and PSU 2 output voltage.

##### Step 2.

Connect the power supply units PSU 1 and PSU 2 to Vin 1 & Vin 2, respectively, of the DRR-20N (or 20A) module shown on the diagram on the right.

##### Step 3.

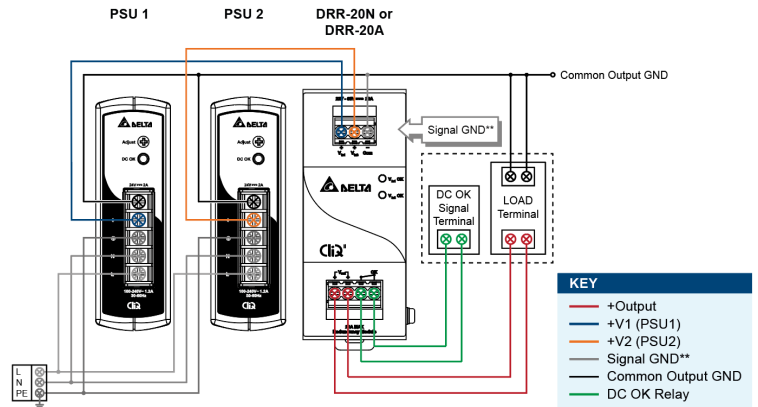

Connect the system load from  $V_{out}$ . Please note that output voltage  $V_{out}$  from DRR module will be  $= V_O$  (output voltage of power supply)  $- V_{drop}^*$  (in DRR module).

\* $V_{drop}$  will vary from 0.60V to 0.90V (Typical 0.65V) depending on the load current and surrounding air temperature.

#### ■ Parallel Operation

The power supply units (PSUs) can also be used for parallel operation in order to increase the output power. The difference in output voltage between the two units must be kept to within 25mV of each other. This difference must be verified with the same output load connected independently to each unit.

Parameters such as EMI, inrush current, leakage current, PARD, start up time will be different from those on the datasheet, when two units are connected in parallel. The user will need to verify that any differences will still allow the two power supplies connected in parallel will work properly in their product/application.

\*\*The Signal GND in the DRR module is for the built-in LED and DC OK signals. The Output GND terminals from the two PSU's do not need to be connected to the Signal GND terminal.

Fig. 2 Redundant Operation Connection Diagram

Fig. 3 Parallel Operation Connection Diagram

## 24V 48W 1 Phase / DRP-24V48W1AZ

Fig. 4 DC Input Operation Connection Diagram

### ■ DC Input Operation

**Step 1.**  
Use a battery or similar DC source.

**Step 2.**  
Connect +pole to L and -pole to N.

**Step 3.**  
Connect the PE terminal to an earth wire or to the machine ground.

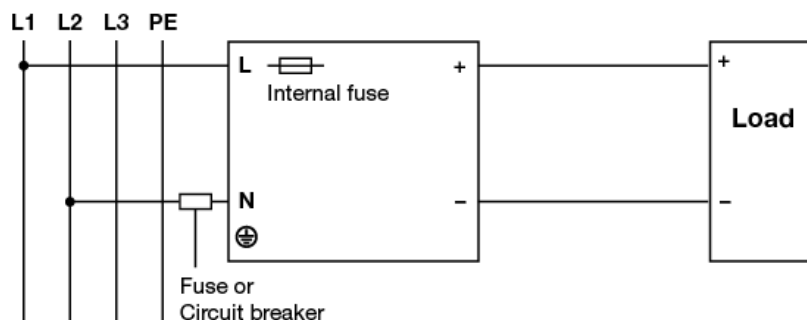

Fig. 5 2 of 3 Phase System Input Operation Connection Diagram

### ■ 2 of 3 Phase System Input Operation

Delta's CliQ can use on 2 of 3 phase system. Please refer to the following step.

**Step 1.**  
The input voltage applied from Line to Neutral is below the maximum rated input. The input voltage shall be below 240 Vac +10%.

**Step 2.**  
The external protector is needed on N (Neutral) input line to secure a safety. N line does not have internal fuse protection. An appropriate fuse or circuit breaker should be connected in series with N input line connection like the following.
